## Geology

- |                                   |                                                  |                                                          |                                                                                |                                                                               |
|-----------------------------------|--------------------------------------------------|----------------------------------------------------------|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| colluvial and alluvial deposits   | alluvial deposits and valley bottoms             | slates, greywackes, conglomerates, limestones            | red/pink, green and white marly limestones (red crusts).                       | conglomerates, sandstones, reddish-yellow pelites and olistolites             |
| alluvial fans, not differentiated | colluvial and alluvial deposits undifferentiated | Diabase                                                  | bioclastic limestones and marls                                                | sandstones and marls. turbidite deposits                                      |
| intermediate terrace              | claystone with Tubotomaculum (clays with blocks) | conglomerates, sandstones, pelites, dolomites and gypsum | limestones and marls with gastropods, carofites and lignite . Coastal deposits | conglomerates, breccias, siliceous marls with silexitas, sandstones and tuffs |
| pediment not differentiated       | water bodies                                     | limestones y dolomites                                   |                                                                                |                                                                               |
